ABOUT

Developer for over 2 years. **As a mobile developer**, I dedicated myself to **developing** my own **company on Google Play** from scratch, **until the publication of the Media Timer app**. Now, I am **looking to build** other **projects** to gain more experience, such as the new application under **development Star T-Shirts**. With the objective to get a **new opportunity** in the apps market **using React Native**.

As a front-end developer, I currently work on a **project with hundreds of clients**, the **SG Master Web system**, where me and my front-end team **developed the project from scratch**. I also **have personal projects**, where I always **seek to challenge myself** to learn **something new**, with **technologies** such as **React**, **Vue** and **many others**.

Lastly, I am a **determined person**, that have the objective to **constantly improve**. I don't like fights, trying always to be **peaceful**. I also, try to **learn** from others and **help as much as possible**.

EXPERIENCES

SGBr® Sistemas – *Front-end Developer* (july/2023 - present)

I work on the **front-end team**, and we have **developed** the **new SG Master Web system**.

Challenges:

• **Creation** and **maintenance** of the Web system **Landing Page**.

• **Development** and **maintenance** of the new **SG Master Web** system.

• **Correction of pages** with the **undo changes button** (this is a **button** that appears in the action bar that **returns the form values** to their **initial state**, whether editing or registration).

• **Implementation** of the **new users permissions**. Where I had to develop **two form pages**, one **for profiles** and other **for users**. I also **changed all system permissions** to the new ones, **created** and **maintained** the **permissions component**, and **developed** to work **with the undo changes button**.

• **Working together** with the **back-end team**, **passing on errors** and necessary **changes** of the project.

• **Implementation** of new **back-end V2 filters for selects** of the old model and new model on the front-end.

• **Refactoring pages** from the old template to the new template.

• **Development** of **components** and **reusable** utility files.

• **Customization** of selects, inputs and other **Quasar components via CSS file**, making the **design different from the framework's default**. To make these changes, I had to use the **DevTools inspector** a lot.

• **Implementation** of **margins** and sending of **tax documents by email**, together with the back-end team. Furthermore, in each module and in the email sending settings, you can **change the footer message** sent in the email in a **WYSIWYG editor**.

Technologies: Vue, Quasar, JavaScript, Tailwind, Pinia, Yup.

Henrique Mascarin – *Founder and Mobile Developer* *(august/2024 - december/2024)*

My company at **Google Play**, where I am responsible for the **apps development** process and issues regarding my brand.

Challenges:

- **Build my brand** on **Google Play** and take care of **marketing** about the **apps** on company's LinkedIn.
- **Develop** from scratch, **publish** and **maintain** in **production** the **Media Timer app** on **Google Play**.
- I had to **learn** about **AdMob**, to place **advertisement in apps**.
- **Project licenses**, to avoid copies.
- Handle **privacy policy** and other **Google** issues related to the projects.

Technologies: React Native, Expo (Bare Workflow), TypeScript, Redux, i18next, Figma.

LANGUAGES

English – Intermediary.   **Portuguese (Brazil) –** Native.

EDUCATION

RSTI Front-end – Senac RS / Trails (Programming Logic and Front-end Web Development) - AUGUST 2022 – MARCH 2023

- Courses that has the objective to empower students for the job market as software developers. **Teaching programming logic**, **HTML5**, **CSS3**, and **interface design**.

Web Design Course – Udemy - NOVEMBER 2022

- I learned how to **develop websites** using **HTML**, **CSS**, and **JavaScript**. With a special touch of **semantics**, **accessibility** and **programming logic**.

Algorithms and Programming Logic Course – Udemy - APRIL 2022

- In this course, has presented **exercises** with **different programming languages** and **explanations** about the subject.
